

Atlas Copco compressors and light tower win Red Dot Design Awards

Stockholm, Sweden, April 4, 2017: Atlas Copco, a leading provider of sustainable productivity solutions, has won two prestigious Red Dot Design Awards for 2017 for portable compressors and a LED light tower.

“We are proud to once again be recognized with this distinguished prize for outstanding design,” said Andrew Walker, President of Atlas Copco’s Construction Technique business area. *“As always, our product design has focused on providing true customer benefits such as boosting performance and operator comfort while reducing fuel consumption and service needs.”*

The Red Dot Design Award for 2017 recognizes Atlas Copco’s 8-series portable compressor range as well as the HiLight H5+ LED light tower. Both products are designed and manufactured by the Portable Energy division in the Construction Technique business area.

The 8-series compressors are recognized for raising the design standards when it comes to size, weight, efficiency and performance, partly by incorporating the latest tough and aesthetically pleasing HardHat® canopy. The light tower was recognized for its innovative optic lenses that maximize light coverage.

The official Red Dot Gala will take place in Essen, Germany, on July 3.
